Blue Phoenix Group to expand its leadership in IBA processing with the acquisition of CC Gruppe in Germany.

Rotterdam, the Netherlands – Blue Phoenix Group B.V., a global leader in Incinerator Bottom Ash (IBA) processing, today announced that it has taken over CC Gruppe GmbH in Germany, one of the larger IBA processing companies in Germany.

Founded in 1969 as a scrap trading business, CC Gruppe has grown to an innovative waste management specialist that, combined with the Blue Phoenix Group skills set, has the potential to expand further in the German and surrounding markets. Employing over 130 people and processing over 600KT of IBA per year, distributed over four facilities, CC Gruppe is a strategic fit for our growth strategy for 2021 and beyond.

Apart from IBA processing skills CC Gruppe brings filter dust management knowledge as well as non-incinerated industrial and municipal waste management knowledge to Blue Phoenix Group.

It is our mission to maximize recovery and produce sustainable mineral and metal products from waste that increasingly can replace virgin materials, contributing to the Circular Economy and help reducing the carbon footprint of an entire industry.

We see a beneficial growth profile for both CC Gruppe and the Blue Phoenix Group as the synergies will enable us to further extend our solution offerings to our customers globally.

About Blue Phoenix Group

Blue Phoenix Group operates incinerator bottom ash (IBA) processing installations globally and helps the Energy-from-Waste sector with alternative sustainable solutions for ash residues. As we see different needs from country-to-country, Blue Phoenix Group has developed a suite of solutions. The Group is active in the UK, USA, EU, Asia, and Australia.
