

Priors Hall Park - Zones 2 & 3 – Adoptable Road Application

Site Address

Priors Hall, Zones 2 and 3, Corby, Northamptonshire, NN17 3JH

Material Specification

2,600t tons of SHW Clause 803 Type 1 IBAA / Granite Blend

Client

Urban & Civic PLC

Delivery Partner

Breheny Civil Engineering Ltd

Construction

The contract was to construct a new road and footpaths to support the new housing development. The Type 1 IBAA / Granite blend was used as an alternative to a primary material. The first phase was a road construction of 240 metres long with an average depth of 200mm, this will be overlaid by 300mm asphalt.

Benefit

IBAA is an extremely cost-effective material when compared to Primary Aggregates and BP UK is working towards a verified Carbon Footprint.

There are also advantages logistically when using IBAA due to the low density of the material allowing for fewer vehicle movements as this gives volumetric advantages over primary materials
